✓	✓	?	?
PRESSURE	9 bar		
✓	✓	?	?
TEMP	93°C		
✓	✓	?	?
STEAM	130°C		

*Third wave specialty coffee is easy to spot*

Traditional automatic coffee with a coarse foamy texture

*Third wave specialty coffee with a silky microfoam texture*

**Left side (Traditional automatic coffee):**

- Large frothy bubbles lacking flavour balance from not properly integrating with the coffee.
- Can taste weak & watery too little coarsely ground coffee.
- Flavour compromised by large variations in the temperature drawing out bitterness and leaving the flavour behind.
- Bitter flavours can dominate the cup as the extraction pressure is not controlled.

**Right side (Third wave specialty coffee):**

- Latte art with a silky mouthfeel from extremely fine microfoam milk bubbles.
- Full bodied flavour delivered with consistent dose of finely ground fresh coffee.
- Balanced flavours delivered by low pressure pre-infusion and extraction pressure limited to 9 bar.

## Third wave specialty coffee at home made possible by the 4 keys formula

### Rich, Full Flavour

Full-bodied coffee with rich and complex flavours is created using the ideal dose of 18-22g of freshly ground beans.

### Irresistible Body

An opulent, creamy and caramel-coloured espresso starts with low pressure pre-infusion, followed by a high pressure (9 bar) extraction process.

### Perfectly Balanced Taste

Sweet, delicious and nuanced flavour notes begin with precise, digital control over water temperature.

### Silky, Velvety Mouthfeel

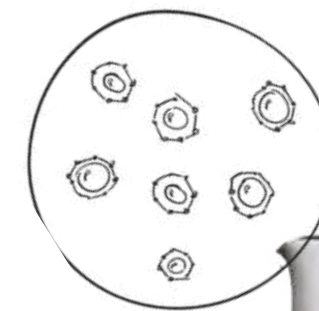

Savour the silky taste and velvety mouthfeel of true microfoam milk, created with powerful steam pressure.

## We are the masters of microfoam

Creating microfoam is a challenge, even for the professional. It requires introducing the right amount of air, integrating it evenly throughout the milk, as well as frothing to the right temperature.

Above 65°C, milk fats start to separate from the proteins in the milk, creating a watery layer and making microfoam impossible to achieve.

Only Sage% Espresso machines deliver the optimum steam pressure to achieve the microfoam necessary for latte art, just like a commercial machine.

The smallest possible bubbles stabilised by proteins

## With your choice of heating systems

### 2 Lattes in 90 Seconds

#### Dual Boiler

Powerful triple heat system

Dual stainless steel boilers and heated group head, controlled by our digital temperature control (PID) automatically delivers the water at precisely the right temperature, extracting maximum flavour potential.

### Ready in 3 Seconds

#### ThermoJet™

Our fastest heating system

Innovative heating system achieves the optimum extraction temperature in 3 seconds. Ready to make the Best coffee without the wait. Start steaming instantly after extraction.

### Fast & Reliable

#### Thermocoil

Driven by PID Temperature Control Integrated stainless steel water coil accurately controls water temperature.

## The Smart Grinder Pro™

### Dosing IQ™

Automatically doses the same amount of coffee every time you grind.

### Precision Timer

Adjust and program the grind time for each shot/cup in 0.2 second increments, giving you total control.

### Adjustable Grind Size

Provides precise grind size and dose time feedback from over 60 grind settings.

### Stainless Steel Conical Burrs

Conical burrs rotate slower than flat burrs, meaning less heat transfer and greater particle surface area, resulting in sweeter and more balanced flavours.

### the Smart Grinder™ Pro
